What is claimed is:

1.	An information list generation apparatus which generates listing data of recorded information obtained from an information source, comprising:

a determination unit determining whether or not there is specific recorded information in the obtained recorded information; and

a generation unit generating listing data comprising recorded information extracted based on a predetermined condition and the specific recorded information when there is the specific recorded information.

2.	The apparatus according to claim 1, wherein said generation unit sets the specific recorded information to be displayed in a high priority position in a listing.

3.	The apparatus according to claim 1, wherein said generation unit sets the specific recorded information to be displayed with an attribute different from an attribute of other recorded information in the listing.

4.   The apparatus according to claim 1, wherein

said generation unit detects an instruction

for the specific recorded information, and sets a

request to immediately display the recorded

5   information to be accepted.

5.   A program for directing a computer to realize

a process of generating listing data for display of

a listing of recorded information obtained from an

10   information source, comprising:

determining whether or not there is specific

recorded information in the obtained recorded

information; and

generating listing data comprising recorded

15   information extracted based on a predetermined

condition and the specific recorded information

when there is the specific recorded information.

6.   The program according to claim 5, wherein

20   in generating the listing data, setting the

specific recorded information to be displayed in a

high priority position in a listing.

7.   The program according to claim 5, wherein

25   in generating the listing data, setting the

specific recorded information to be displayed with an attribute different from an attribute of other recorded information in the listing.

5   8.   The program according to claim 5, wherein in generating the listing data, detecting an instruction for the specific recorded information, and setting a request to immediately display the recorded information to be accepted.
